We believe that pool treadmills are the next step in water based rehabilitation. Performing walking exercises should be possible in any available pool. This is why EWAC Medical has developed the Drop-In underwater treadmill.

This Drop-In underwater treadmill conforms to the highest norms with regard to safety, user friendliness and operational stability.

The Drop-In underwater treadmill offers an enormous expansion of the treatment possibilities for the therapist. By varying the speed, the exercise can be adapted to the capabilities of the patient. The underwater treadmill can be used rehabilitation, sports exercise, or to combat obesity.

The treadmill is equipped with a user-friendly control panel. The walking speed is easily adjustable which allows the therapist to personalize every training.

The combination of the Drop-in treadmill with an EWAC treadmill lifting system offers an enormous expansion of the possibilities. By being able to adjust the depth, the exercise can be adjusted to the individual capabilities of the user,

making the Drop-in treadmill a highly adjustable tool in training

The underwater treadmill can be positioned in any position in the pool, and can be stored elsewhere after use.

Have patients recover faster with an EWAC Medical Drop-In underwater treadmill.
